

The graph displays the relationship between BAR pressure and flow rate for a 1000 cc engine. The y-axis represents BAR pressure, ranging from 0 to 5.2 in increments of 0.4. The x-axis represents flow rate in liters per minute (lt/min), ranging from 0 to 7.2 in increments of 1.2. The curve starts at approximately 0.5 BAR at 3.0 lt/min, rises to a peak of about 5.0 BAR at 4.8 lt/min, then drops sharply to around 2.4 BAR at 5.5 lt/min, and finally decreases to approximately 0.5 BAR at 6.0 lt/min.

Flow rate (lt/min)	BAR pressure
3.0	0.5
3.6	0.8
4.2	1.2
4.8	5.0
5.2	2.8
5.5	2.4
6.0	0.5
