Handshower flow rate

The graph displays the relationship between Handshower flow rate (Flow rate lt/min) and BAR pressure (Pressione in BAR). The flow rate ranges from 0 to 37 lt/min, and the pressure ranges from 0 to 5.2 BAR. The curve shows a non-linear increase in pressure with flow rate, starting around 0.5 BAR at 5 lt/min and reaching approximately 5.0 BAR at 18 lt/min.

Flow rate lt/min	Pressione in BAR
5	0.5
7	0.8
9	1.2
11	1.6
13	2.2
15	2.8
17	3.6
18	5.0
